To ensure that the settings have not been disturbed, check the following before each spreading run:

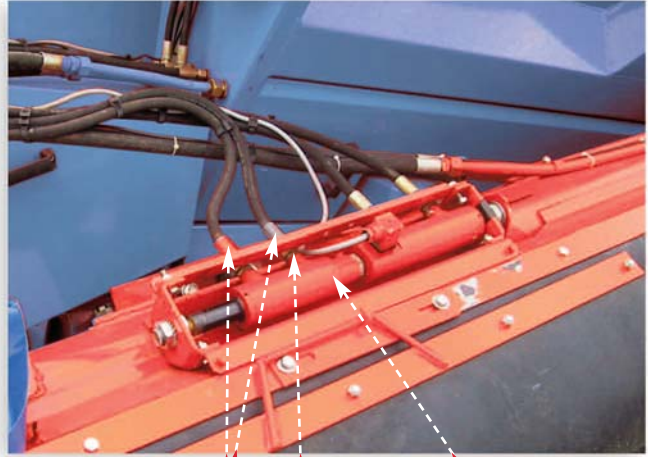

- Right boom:
 - Check that the valve is completely open when the stroke of the sensor actuator is at 44mm ±1mm (actuator rod fully extended).
- Left boom:
 - Check that the valve is completely open when the stroke of the sensor actuator is at 0mm (actuator rod fully retracted).

If these 2 conditions are satisfied then the system does not need to be adjusted. Otherwise, adjust as necessary, using the adjusting nuts (see diagram).

NB: However, if the system has lost its settings and it is not possible to find the initial setup, please contact our service.

To ensure that the settings have not been disturbed, check the following before each spreading run:

- Right boom:
 - Check that the valve is completely open when the stroke of the sensor actuator and the all or nothing actuator are at 44mm $\pm$ 1mm (rods of the two actuators are fully extended).
- Left boom:
 - Check that the valve is completely open when the stroke of the sensor actuator and the all or nothing actuator are at 0mm (rods of the two actuators are fully retracted).

If these 2 conditions are satisfied then the system does not need to be adjusted. Otherwise, adjust as necessary, using the adjusting nuts (see diagram).

NB: However, if the system has lost its settings and it is not possible to find the initial setup, please contact our service.

Maintenance

- For the system to work correctly, it is necessary to check (every 30 working hours):
 - The general state of all the moving parts.
 - The chain tension and the wear of the tender roller.
 - The bolts are correctly tightened.

S160 H - EP04 / D190 H - EP05

The anti-bridging device is equipped with a manual flow control which acts on the rotor rotation speed. It is recommended that the speed be adjusted to the product being used, without exceeding 10 rpm maximum at the rotor. Never climb into the hopper even if the rotor is not moving. Before any intervention, please stop the tractor engine and disconnect the hydraulic cables (push-pull) and the tractor power take off when the spreader is equipped with central hydraulics.

Maintenance

- For the system to work correctly, it is necessary to check (every 30 working hours):
 - The general state of all the moving parts (friction plates, springs etc.).
 - The wear of the tender roller.
 - The bolts are correctly tightened.

Do not forget to grease the 2 rotor bearings with bearing grease (rep. 9 and 10).
